

## Precalculus Unit 0: Prerequisites

Lesson	Learning Targets
0.1 The Cartesian Plane	<ul style="list-style-type: none"><li>• Connect the distance formula to the Pythagorean theorem by identifying the distance between two coordinate points as the hypotenuse of a right triangle.</li><li>• Decompose segments on the coordinate plane into horizontal and vertical components to find missing lengths and coordinates.</li><li>• Understand that the midpoint of a segment is equidistant from both endpoints and can be found by averaging the x and y coordinates.</li></ul>
0.2 Equations of Circles	<ul style="list-style-type: none"><li>• Define the graph of a circle to be the set of all points that are exactly one radius length away from a given center.</li><li>• Identify the center and radius of a circle given an equation in standard form.</li><li>• Write the equation of a circle given information about its center, radius, or diameter.</li></ul>
0.3 Solving Equations in Multiple Representations	<ul style="list-style-type: none"><li>• Use graphs, tables, and algebraic methods to find solutions to an equation or to approximate a solution to an equation.</li><li>• Interpret a solution to an equation in a real-world context.</li></ul>
0.4 Reasoning with Formulas	<ul style="list-style-type: none"><li>• Re-write equations in terms of a different variable.</li><li>• Explore relationships between the dimensions and volumes of various solids.</li></ul>
0.5 Linear Relationships	<ul style="list-style-type: none"><li>• Identify situations with a constant rate of change as describing linear relationships</li><li>• Interpret a y-intercept and slope in context</li><li>• Write an equation of a line in slope-intercept and point-slope form</li></ul>
0.6 Reasoning with Slope	<ul style="list-style-type: none"><li>• Understand that vertical lines have no "run" and horizontal lines have no "rise" and use this to write their equations</li><li>• Use properties of parallel and perpendicular lines to reason about their slopes</li></ul>

### 0.7 Set Notation

- Understand how algebraic, set, and interval notation can be used to describe collections of objects, specifically numbers.
- Given a visual or algebraic description of a set, determine the values that are included or excluded.

## Precalculus Unit 1: Functions

Lesson	Learning Targets
1.1 Functions and Function Notation	<ul style="list-style-type: none"><li>• Understand that functions represent situations where one quantity determines another and each input has exactly one output.</li><li>• Evaluate functions in function notation to find outputs for provided inputs and solve equations to find an input that yields a given output.</li><li>• Analyze functions in multiple representations.</li><li>• Interpret statements that use function notation in a given context.</li></ul>
1.2 Domain and Range	<ul style="list-style-type: none"><li>• Connect the domain of a function to its possible inputs and the range of a function to its possible outputs</li><li>• Determine the domain and range of a function graphically, analytically, and numerically</li></ul>
1.3 Rates of Change and Graph Behavior	<ul style="list-style-type: none"><li>• Calculate and interpret an average rate of change over an interval using proper units</li><li>• Identify the intervals on which a function is increasing, decreasing, or constant</li><li>• Understand that the transition from increasing to decreasing results in a local maximum and the transition from decreasing to increasing results in a local minimum.</li><li>• Find and interpret the zeros of a function in context</li></ul>
1.4 Library of Parent Functions	<ul style="list-style-type: none"><li>• Describe the key features of six parent functions: identity, absolute value, square root, quadratic, cubic, and reciprocal.</li><li>• Analyze and compare the key features of parent functions.</li><li>• Understand that the parent function represents the most basic function in a function family.</li></ul>
1.5 Transformations of Functions	<ul style="list-style-type: none"><li>• Apply vertical and horizontal shifts and stretches to parent functions to graph the transformed functions</li><li>• Given an equation, describe the transformations from the parent function</li><li>• Use the knowledge of transformations to determine the domain and range of a function.</li></ul>

1.6 Even and Odd Functions	<ul style="list-style-type: none"> <li>• Write a rule for determining whether a function is even, odd, or neither.</li> <li>• Algebraically prove whether a function is even, odd, or neither.</li> <li>• Visually determine whether a function is even, odd, or neither.</li> </ul>
1.7 Building Functions	<ul style="list-style-type: none"> <li>• Interpret scenarios that require adding, subtracting, multiplying, or dividing functions</li> <li>• Combine standard function types using arithmetic operations.</li> <li>• Find the domain of a combination of functions by selecting the most restrictive domain; when two functions are divided, ensure that the denominator is not zero.</li> </ul>
1.8 Compositions of Functions	<ul style="list-style-type: none"> <li>• Understand that when two functions are composed, the output of one function becomes the input of the other</li> <li>• Interpret the input and output of composite functions in context</li> <li>• Evaluate and write equations for compositions of functions by plugging the inner function in as the independent variable of the outer function</li> <li>• Find the domain of a composition of functions</li> </ul>
1.9 Inverse Functions	<ul style="list-style-type: none"> <li>• Repeatedly solve equations of the form <math>f(x)=c</math> to recognize the need for a function that "undoes" the original function, i.e. to find the value in the domain that generates a certain output.</li> <li>• Read values of an inverse function from a graph or a table, given that the function has an inverse.</li> <li>• Find an inverse function algebraically</li> <li>• Verify by composition that one function is an inverse of another</li> </ul>
1.10 Graphs of Inverse Functions	<ul style="list-style-type: none"> <li>• Explain why a function must be one-to-one in order for the inverse to be a function</li> <li>• Explore relationships between the domains and ranges of functions and their inverses</li> </ul>
1.11 Piecewise Functions	<ul style="list-style-type: none"> <li>• Interpret and evaluate functions that have different rules for certain intervals of the domain.</li> <li>• Graph piecewise-defined functions.</li> <li>• Write equations for piecewise-defined functions given a scenario or a graph.</li> </ul>

## Precalculus Unit 2: Polynomial and Rational Functions

Lesson	Learning Targets
2.1 Connecting Quadratics	<ul style="list-style-type: none"><li>Describe how standard, vertex, and intercept forms of quadratics demonstrate unique, but related features of parabolas.</li><li>Rewrite quadratics into intercept form by factoring; identify zeros from intercept form.</li></ul>
2.2 Completing the Square	<ul style="list-style-type: none"><li>Recognize that quadratics of the form <math>y=a(x-h)^2</math> are perfect squares, have a vertex on the x-axis, and have identical factors.</li><li>Rewrite quadratics into vertex form by completing the square</li></ul>
2.3 Polynomials in the Short Run	<ul style="list-style-type: none"><li>Determine a polynomial's x- and y-intercepts from its equation</li><li>Use a root's multiplicity to describe the graph's behavior at an x-intercept</li><li>Determine the maximum number of turning points and roots of a polynomial using the Fundamental Theorem of Algebra</li></ul>
2.4 Polynomials in the Long Run	<ul style="list-style-type: none"><li>Identify the degree and leading coefficient of any polynomial function</li><li>Describe a polynomial's end behavior by looking at its degree and leading coefficient</li><li>Sketch the graph of a polynomial function by attending to its x- and y-intercepts, zeros, and end behavior</li></ul>
2.5 Factor and Remainder Theorem	<ul style="list-style-type: none"><li>Explain why when <math>(x-k)</math> is a factor of a polynomial, <math>x=k</math> is a zero of the polynomial</li><li>Interpret the remainder of a polynomial divided by <math>(x-k)</math></li><li>Given one factor of a polynomial function, use division to find the remaining factors</li></ul>
2.6 Complex Zeros	<ul style="list-style-type: none"><li>Identify cases where a polynomial will have a complex zero based on its graph or equation</li><li>Understand why complex zeros come in conjugate pairs and use this to describe the zeros of a polynomial</li><li>Add, subtract, and multiply complex zeros</li></ul>

2.7 Connecting Zeros Across Multiple Representations	<ul style="list-style-type: none"> <li>• Given an equation of a polynomial, use a table or graph to find initial zeros, then find remaining zeros</li> <li>• Factor a polynomial completely</li> </ul>
2.8 Intro to Rational Functions	<ul style="list-style-type: none"> <li>• Explore the behavior of rational functions in a real-world context</li> <li>• Solve simple rational equations</li> <li>• Describe a rational function's end behavior by comparing growth rates of numerator and denominator functions</li> <li>• Determine when a rational function will have a slant asymptote and write its equation.</li> </ul>
2.9 Graphing Rational Functions	<ul style="list-style-type: none"> <li>• Distinguish between vertical asymptotes and holes</li> <li>• Use intercepts, asymptotes, and holes to sketch rational functions</li> <li>• Find the domain of a rational function</li> </ul>

## Precalculus Unit 3: Exponential and Logarithmic Functions

Lesson	Learning Targets
3.1 Exponential Functions	<ul style="list-style-type: none"> <li>Recognize scenarios that depict exponential growth by identifying a fixed percent/factor; distinguish exponential growth from linear growth</li> <li>Write an exponential function modeling a scenario involving growth or decay by a fixed percent/factor</li> <li>Understand that an exponential function is a function in which a positive constant (<math>b</math>) is raised to a variable (<math>x</math>), where <math>0 &lt; b &lt; 1</math> represents exponential decay and <math>b &gt; 1</math> represents exponential growth; identify the value of <math>b</math> given points on an exponential function</li> </ul>
3.2 Graphs of Exponential Functions	<ul style="list-style-type: none"> <li>Graph functions of the form <math>y = b^x</math> and identify horizontal asymptotes, domain, range, and key points</li> <li>Describe transformations of an exponential function from graphs and equations</li> <li>Reason about equivalent forms of exponential functions</li> </ul>
3.3 Compound Interest and an Introduction to "e"	<ul style="list-style-type: none"> <li>Model the total value of a loan or investment at the end of a specified term by using repeated multiplication</li> <li>Describe the effects of compounding quarterly, monthly, weekly, daily, and continually and make use of structure to arrive at the compound interest formula</li> <li>Understand "e" as the base rate of growth for all continually growing processes</li> </ul>
3.4 Logarithmic Functions	<ul style="list-style-type: none"> <li>Understand that a logarithm represents the exponent to which the base must be raised in order to attain the input value; use this understanding to evaluate logarithmic expressions.</li> <li>Use exponential and logarithmic forms to write equivalent statements about powers.</li> <li>Explain why the logarithmic function has a restricted domain.</li> <li>Understand the inverse relationship between exponential and logarithmic functions of the same base, including the natural base, <math>e</math>.</li> </ul>

3.5 Graphs of Logarithmic Functions	<ul style="list-style-type: none"> <li>• Sketch logarithmic functions using the key points (1,0) and (b,1)</li> <li>• Connect key features (domain, range, asymptotes, and end behavior) on the graphs of exponential and logarithmic functions</li> <li>• Describe transformations of an logarithmic function and graph using the key points (1, 0) and (b, 1)</li> </ul>
3.6 Logarithm Properties	<ul style="list-style-type: none"> <li>• Discover the sum, difference, and power properties of logarithms by using inductive reasoning</li> <li>• Use properties of logarithms to expand or condense expressions</li> <li>• Identify and write equivalent logarithmic expression</li> </ul>
3.7 Solving Exponential and Logarithmic Equations	<ul style="list-style-type: none"> <li>• Rewrite exponential and logarithmic equations into their alternate form to isolate a variable</li> <li>• Solve exponential and logarithmic equations by applying the one-to-one property</li> <li>• Combine knowledge of inverse operations and logarithm properties to solve logarithmic equation</li> </ul>
3.8 Exponential and Logarithmic Modeling	<ul style="list-style-type: none"> <li>• Create models for half-life or double life problems and use solving techniques to answer questions based on the model.</li> <li>• Use exponential functions to model population growth, disease growth, and compounded interest.</li> <li>• Interpret answers to exponential and logarithmic modeling problems</li> </ul>

## Precalculus Unit 4: Trigonometric Functions

Lesson	Learning Targets
4.1 Right Triangle Trig	<ul style="list-style-type: none"><li>• Understand that sine, cosine, and tangent are functions that input angles and output ratios of specific sides in right triangles.</li><li>• Given one trigonometric ratio, find the other two trigonometric ratios.</li><li>• Use the trigonometric ratios to find missing sides in a right triangle</li></ul>
4.2 Inverse Trig Ratios	<ul style="list-style-type: none"><li>• Understand that the angles in a right triangle are determined by the ratio of the sides</li><li>• Use the trigonometric ratios to find missing angles in a right triangle</li></ul>
4.3 Radians and Degrees	<ul style="list-style-type: none"><li>• Understand that a radian is an angle measure with an arc length of one radius</li><li>• Use circumference to explain why <math>2\pi</math> radians corresponds to one full rotation</li><li>• Use proportional reasoning to convert between angles measured in radians and degrees</li></ul>
4.4 Unit Circle	<ul style="list-style-type: none"><li>• Use the legs of special right triangles with hypotenuse of 1 to find ordered pairs on the unit circle at key angles.</li><li>• Evaluate sine, cosine, and tangent values for angles in the first quadrant.</li></ul>
4.5 Unit Circles	<ul style="list-style-type: none"><li>• Evaluate sine, cosine, and tangent at angles on the unit circle.</li><li>• Find angles on the unit circle that satisfy trigonometric equations with sine, cosine, and tangent.</li><li>• Use reference angles to explain the symmetry of the unit circle in the four quadrants.</li></ul>
4.6 Other Trig Functions	<ul style="list-style-type: none"><li>• Define secant, cosecant, and cotangent functions as reciprocals of cosine, sine, and tangent, respectively.</li><li>• Evaluate secant, cosecant, and cotangent functions at angles on the unit circle.</li><li>• Find angles on the unit circle that satisfy a trigonometric equation with all six trig functions.</li></ul>

4.7 Graphing Sine and Cosine	<ul style="list-style-type: none"> <li>• Understand that sine and cosine functions can be graphed by plotting angles on the x-axis, and ratios on the y-axis</li> <li>• Explain why the range of sine and cosine is <math>[-1,1]</math></li> <li>• Use amplitude and period to describe key characteristics of the parent functions <math>\sin(x)</math> and <math>\cos(x)</math></li> </ul>
4.8 Transformations of Sine and Cosine Graphs	<ul style="list-style-type: none"> <li>• Determine how the amplitude and period are affected by transformations</li> <li>• Graph transformed sine and cosine functions given an equation</li> </ul>
4.9 Graphing Secant and Cosecant	<ul style="list-style-type: none"> <li>• Understand how asymptote equations are found for secant and cosecant by finding when the function in the denominator is equal to 0.</li> <li>• Graph secant and cosecant and identify the period and asymptote equations.</li> <li>• Write equations of secant and cosecant when provided with key features of the graph</li> </ul>
4.10 Graphing Tangent and Cotangent	<ul style="list-style-type: none"> <li>• Understand how asymptote equations are found for tangent, and cotangent by finding when the function in the denominator is equal to 0.</li> <li>• Graph tangent and cotangent and identify the period and asymptote equations.</li> <li>• Write equations of tangent and cotangent when provided with key features of the graph</li> </ul>
4.11 Inverse Trig Functions	<ul style="list-style-type: none"> <li>• Explain why and how the domains of sine, cosine, and tangent must be restricted to create an inverse function.</li> <li>• Use the restricted domains of the sine, cosine, and tangent, and reason to reason about the domains and ranges of the inverse functions.</li> <li>• Evaluate inverse trig expressions and equations.</li> </ul>
4.12 Trigonometric Modeling	<ul style="list-style-type: none"> <li>• Use trigonometric equations to model real-world periodic behavior.</li> <li>• Interpret period and amplitude in context.</li> </ul>
4.13 Trigonometric Identities	<ul style="list-style-type: none"> <li>• Explain the relationship between the six trigonometric ratios.</li> <li>• Simplify trigonometric expressions using trigonometric and Pythagorean identities.</li> </ul>

## Precalculus Unit 5: Applications of Trigonometry

Lesson	Learning Targets
5.1 Law of Sines	<ul style="list-style-type: none"> <li>Discover the relationship between sides and their opposite angles in any triangle</li> <li>Identify the conditions needed to use the Law of Sine</li> <li>Solve for missing sides and angles using the Law of Sines</li> </ul>
5.2 The Ambiguous Case (SSA)	<ul style="list-style-type: none"> <li>Understand why when given two sides and a non-included angle, there could be 0, 1, or 2 triangles formed.</li> <li>Determine the number of triangles that can be formed when given two sides and the non-included angle.</li> <li>Solve triangles using the Law of Sines.</li> </ul>
5.3 Law of Cosines	<ul style="list-style-type: none"> <li>Understand the Law of Cosines as a more general form of the Pythagorean Theorem for oblique triangles</li> <li>Solve for missing sides and angles using the Law of Cosines</li> </ul>
5.4 Area and Applications of Laws	<ul style="list-style-type: none"> <li>Apply Law of Sines and Law of Cosines to applied problems</li> <li>Identify general area formulas for oblique triangles based on the given parts</li> <li>Reason about the validity of a mathematical model</li> </ul>
5.5 Vectors	<ul style="list-style-type: none"> <li>Interpret vectors as quantities that have both magnitude and direction</li> <li>Write vectors in component form</li> <li>Add, subtract, and scale vectors algebraically and graphically</li> </ul>
5.6 Polar Coordinates	<ul style="list-style-type: none"> <li>Understand the polar system as an alternate way of describing locations by using a radius and an angle</li> <li>Use coterminal angles and reflected radii to name polar points in multiple ways</li> <li>Convert between polar and Cartesian coordinates</li> </ul>
5.7 Equations in Polar and Cartesian Form	<ul style="list-style-type: none"> <li>Use the conversion formulas to rewrite equations of graphs in their alternate forms.</li> <li>Recognize that some graphs are more easily described in polar coordinates whereas others are more easily described in Cartesian coordinates</li> </ul>

5.8 Polar Graphs Part 1	<ul style="list-style-type: none"> <li>• Generalize polar equations for circles and roses based on inquiry</li> <li>• Describe key features of roses from their equation (symmetry, number of petals, location of petals)</li> <li>• Understand graphing polar equations through point-by-point graphing</li> </ul>
5.9 Polar Graphs Part 2	<ul style="list-style-type: none"> <li>• Identify special types of limacons by comparing values of the parameters, <math>a</math> and <math>b</math></li> <li>• Describe the key features of limacons from their equation</li> <li>• Reason about the range and intercepts of limacons</li> </ul>
5.10 Parametric Equations	<ul style="list-style-type: none"> <li>• Define a parameter as a third variable that is used to generate values of <math>x</math> and <math>y</math>.</li> <li>• Graph non-trigonometric parametric equations from tables</li> <li>• Convert between parametric and Cartesian equations by eliminating or adding a parameter</li> </ul>
5.11 Parametric Equations (With Trigs)	<ul style="list-style-type: none"> <li>• Graph parametric equations involving trigonometry using tables</li> <li>• Use the Pythagorean identity to convert between parametric and Cartesian equations of circles and ellipses</li> <li>• Understand the advantages of parameterizing a curve</li> </ul>

## Precalculus Unit 6: Systems of Equations

Lesson	Learning Targets
6.1 What is a Solution?	<ul style="list-style-type: none"><li>• Define a solution as an ordered pair that satisfies an equation and is thus on the graph of that equation</li><li>• Use algebraic and graphical methods to find solutions to systems of equations</li><li>• Determine when a system of equations will be inconsistent</li></ul>
6.2 Solving Systems with Substitution	<ul style="list-style-type: none"><li>• Identify equivalent expressions in order to make substitutions</li><li>• Interpret scenarios that represent breaking even</li><li>• Select an appropriate strategy for solving a system</li></ul>
6.3 Solving Systems with Elimination	<ul style="list-style-type: none"><li>• Explain the method of elimination using scaling and comparison</li><li>• Determine the conditions that result in dependent, independent, and inconsistent systems</li><li>• Connect contextual, graphical, and analytical representations of dependent, independent, and inconsistent systems</li></ul>
6.4 Solving Systems in 3 Variables	<ul style="list-style-type: none"><li>• Explain the importance of row-echelon form in solving a three variable linear system</li><li>• Solve independent linear systems in three variables using Gaussian elimination</li><li>• Determine when a system in three variables results in an inconsistent or dependent system</li><li>• Write the general solution to a dependent system of equations</li></ul>
6.5 Partial Fractions	<ul style="list-style-type: none"><li>• Apply rules for adding and subtracting fractions to rational function</li><li>• Decompose rational functions with distinct, linear factors into partial fractions</li></ul>

## Precalculus Unit 7: Sequences and Series

Lesson	Learning Targets
Unit Intro: Introducing Sequences	<ul style="list-style-type: none"><li>• Describe visual patterns with equations</li><li>• Explore sequences with a constant second difference</li></ul>
7.1 Using Sequences and Series to Describe Patterns	<ul style="list-style-type: none"><li>• Use sequence and series notation to describe patterns</li><li>• Distinguish between explicit and recursive formulas</li><li>• Find partial sums by hand and with a calculator</li></ul>
7.2 Arithmetic Sequences and Series	<ul style="list-style-type: none"><li>• Write explicit rules to describe sequences with a common difference</li><li>• Generate a sum formula for arithmetic sequences using the idea of averages</li><li>• Find missing terms of an arithmetic sequence</li><li>• Solve for the term number in which a sequence reaches a particular sum.</li></ul>
7.3 Geometric Sequences and Finite Series	<ul style="list-style-type: none"><li>• Write explicit rules to describe sequences with a common ratio</li><li>• Generalize a pattern to find the sum of a finite geometric sequence</li><li>• Solve for the term number in which a sequence reaches a particular sum</li></ul>
7.4 Infinite Geometric Sequences and Series	<ul style="list-style-type: none"><li>• Explore the behavior of a geometric sequence as <math>n</math> approaches infinity.</li><li>• Understand when and how adding infinitely many terms can lead to a finite sum.</li></ul>
7.5 Proof by Induction	<ul style="list-style-type: none"><li>• Understand what constitutes as mathematical proof</li><li>• Explain the importance of the base case, induction hypothesis, and induction step in writing a proof by induction</li><li>• Write a four-step proof by induction</li></ul>

## Precalculus Unit 8: Limits

Lesson	Learning Targets
8.1 What is a Limit?	<ul style="list-style-type: none"><li>• Understand limits as predicted or intended outputs based on surrounding behavior</li><li>• Evaluate limits using graphs and tables</li><li>• Use limit notation to describe function behavior to the left and right of a particular <math>x</math>-value</li></ul>
8.2 Evaluating Limits Graphically	<ul style="list-style-type: none"><li>• Evaluate limits using graphs</li><li>• Connect expressions of limits across multiple representations</li></ul>
8.3 Evaluating Limits with Direct Substitution	<ul style="list-style-type: none"><li>• Use direct substitution to evaluate limits</li><li>• Evaluate limits of piecewise functions</li><li>• Determine when direct substitution will work as a strategy for evaluating limits</li></ul>
8.4 Evaluating Limits Analytically	<ul style="list-style-type: none"><li>• Connect factors and zeros of rational functions to holes and vertical asymptotes</li><li>• Use limits to describe function behavior at holes and asymptotes</li><li>• Use known limits to reason about unknown limits</li><li>• Choose an appropriate strategy for evaluating a limit</li></ul>
8.5 Continuity	<ul style="list-style-type: none"><li>• Classify discontinuities as jump, removable, or infinite from a graph or equation</li><li>• Justify whether a function is continuous at a particular <math>x</math>-value using the definition of continuity</li><li>• Determine when and how discontinuous functions can be made continuous</li></ul>
8.6 Intermediate Value Theorem	<ul style="list-style-type: none"><li>• Verify the conditions of the Intermediate Value Theorem</li><li>• Make conclusions about the outputs of a function using the Intermediate Value Theorem</li><li>• Apply the Intermediate Value Theorem to prove the existence of roots.</li></ul>
8.7 Limits at Infinity	<ul style="list-style-type: none"><li>• Describe vertical and horizontal asymptotes using limit notation</li><li>• Evaluate limits as <math>x</math> approaches infinity by comparing growth rates of numerator and denominator functions</li></ul>

## Precalculus Unit 9: Derivatives

Lesson	Learning Targets
Unit 9 Intro: Introduction to Derivatives	<ul style="list-style-type: none"> <li>• Explore rates of change in context</li> <li>• Estimate and compare rates of change from a graph</li> <li>• Interpret and calculate average rate of change</li> </ul>
9.1 Average versus Instantaneous Rates of Change	<ul style="list-style-type: none"> <li>• Understand average rate of change as the slope over an interval and instantaneous rate of change as the slope at a point</li> <li>• Estimate instantaneous rate of change by calculating the average rate of change over a short interval</li> </ul>
9.2 Calculating Instantaneous Rate of Change	<ul style="list-style-type: none"> <li>• Understand that limits turn an estimate of the instantaneous rate of change into the exact value of the slope</li> <li>• Set-up and evaluate a limit expression that gives the slope at a single point</li> <li>• Write the equation of a tangent line to a curve at a given point</li> </ul>
9.3 The Derivative Function	<ul style="list-style-type: none"> <li>• Define a derivative as the slopes graph of an original function</li> <li>• Understand that the derivative is itself a function that outputs the slope of the curve at any x-value</li> <li>• Find an equation for the derivative function using the limit definition of the derivative</li> <li>• Use derivative notation to refer to derivative functions and derivatives evaluated at a point</li> </ul>
9.4 Derivative Shortcuts	<ul style="list-style-type: none"> <li>• Recognize patterns to find shortcuts for derivatives of constant, linear, and power functions</li> <li>• Apply derivative shortcuts to polynomials and other power functions</li> </ul>
9.5 Differentiability	<ul style="list-style-type: none"> <li>• Understand the conditions needed to draw a tangent line at a point and define this property as differentiability</li> <li>• Explain the relationship between continuity and differentiability</li> <li>• Justify whether a function is differentiable using the limit definition</li> </ul>

9.6 Connecting $f$ and $f'$	<ul style="list-style-type: none"> <li>• Use the first derivative to justify whether a function is increasing, decreasing, or not changing.</li> <li>• Use rates of change to describe when a function has a relative maximum or minimum and relate this to optimization</li> <li>• Justify where a function has a relative extrema using the first derivative test</li> <li>• Connect graph features on the graphs of <math>f</math> and <math>f'</math></li> </ul>
9.7 Derivatives of Sine and Cosine	<ul style="list-style-type: none"> <li>• Connect the behavior of sine and cosine functions to their derivatives</li> <li>• Evaluate derivatives that include sine and cosine</li> <li>• Write equations of lines tangent to the sine and cosine graphs</li> </ul>
9.8 Product Rule	<ul style="list-style-type: none"> <li>• Use visuals to make sense of the product rule</li> <li>• Evaluate derivatives using the product rule</li> </ul>
9.9 Quotient Rule	<ul style="list-style-type: none"> <li>• Evaluate derivatives using the quotient rule</li> </ul>

## Precalculus Unit 10: Conic Sections

Lesson	Learning Targets
10.1 Intro to Conic Sections	<ul style="list-style-type: none"> <li>• Understand that a conic section is the shape formed when a plane and a cone intersect.</li> <li>• Identify the 4 shapes formed as parabola, circle, ellipse, and hyperbola.</li> </ul>
10.2 Defining Parabolas	<ul style="list-style-type: none"> <li>• Understand that a parabola is the set of points equidistant from a fixed point, called the focus, and a line, called the directrix.</li> <li>• Given the equation of a parabola, identify the focus, vertex, directrix, and two additional points.</li> <li>• Graph a parabola from its key features.</li> </ul>
10.3 Working with Parabolas	<ul style="list-style-type: none"> <li>• Given the equation of a parabola, identify the focus, vertex, directrix, and two additional points.</li> <li>• Graph a horizontal parabola and identify the key features.</li> <li>• Complete the square to re-write the equation of a parabola in vertex form.</li> </ul>
10.4 Defining Ellipses	<ul style="list-style-type: none"> <li>• Understand that an ellipse is like a circle, but with different horizontal and vertical dimensions.</li> <li>• Graph an ellipse and identify key features such as vertices, major axis length, and minor axis length.</li> <li>• Write the equation of an ellipse in standard conic form by completing the square.</li> </ul>
10.5 Working with Ellipses	<ul style="list-style-type: none"> <li>• Understand that for any point on an ellipse, the sum of the distances from the point to each focus is the length of the major axis.</li> <li>• Derive the equation of <math>c</math> for an ellipse by investigating the relationship between <math>a</math>, <math>b</math>, and <math>c</math>.</li> <li>• Write the equation of an ellipse when given key features such as the foci, vertices, and major or minor axis length.</li> </ul>
10.6 Defining Hyperbolas	<ul style="list-style-type: none"> <li>• Explore the graph and key features of a hyperbola.</li> <li>• Write the equation of a hyperbola when given the key features.</li> <li>• Use the center, vertices, and asymptotes of a hyperbola to construct the graph.</li> </ul>

### 10.7 Working with Hyperbolas

- Understand that for any point on a hyperbola, the difference between the distances from any point to each focus is the length of the transverse axis.
- Write the equation of a hyperbola when given key features such as the foci, vertices, transverse or conjugate axis length, or asymptote equations.
